

2016-QFileDialog 类文件对话框实战--零声教育

一、QFileDialog 类 (文件对话框)

通过 `QFileDialog` 类允许用户遍历系统文件，选择一个或多个文件或目录。

QFileDialog Class

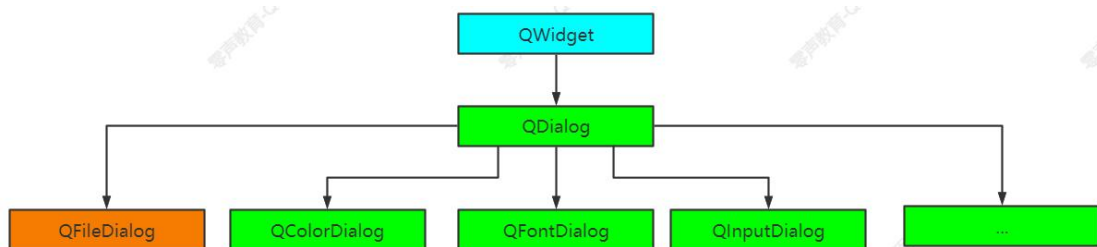

The `QFileDialog` class provides a dialog that allow users to select files or directories. [More...](#)

Header: `#include <QFileDialog>`

qmake: `QT += widgets`

Inherits: `QDialog`

- [List of all members, including inherited members](#)
- [Obsolete members](#)

二、【程序运行结果】

```
[static] QString QFileDialog::getOpenFileName(QWidget *parent = nullptr, const QString &caption = QString(), const QString &dir = QString(), const QString &filter = QString(), QString *selectedFilter = nullptr, QFileDialog::Options options = Options())
```

This is a convenience static function that returns an existing file selected by the user. If the user presses Cancel, it returns a null string.

```
QString fileName = QFileDialog::getOpenFileName(this, tr("Open File"),
        "/home",
        tr("Images (*.png *.xpm *.jpg)"));
```
